FOR IMMEDIATE RELEASE

Micro Key Solutions is leading the industry in data protection

Micro Key Solutions, a leading provider in central station and accounting software releases an enhanced version of their backup and continuity service offering product, Micro Vault.

With the threats of cyber-attacks continuing to evolve, the security industry is constantly in search of products and services that can provide the highest level of protection for their customer databases.

Micro Vault provides Micro Key customers a complete daily cloud backup and disaster recovery strategy that also includes a proprietary validation of the data. Unlike typical off-site and cloud backup products out there, Micro Key's Rapid Recovery Option with Micro Vault Plus includes spinning up your company data into a secure Amazon Cloud server which eliminates down time and the need to wait for new hardware.

During an emergency is not the time to know if your data is protected and Micro Vault gives customers the peace of mind that their data is safe and recoverable no matter what.

"In today's world of data breaches and Ransomware causing tremendous losses of both time and money, you need to be sure that your Micro Key database is protected. With Micro Key's MicroVault, you can rest assured that your database contains no errors, is backed up in an encrypted format, and in a secure off-site location in the case that your office infrastructure were to be compromised by one of these common occurrences. Your security is our responsibility with MicroVault." Says Micro Key's Director of Cloud Services, Stephen Kovacsiss

Micro Key recently enhanced the original offering to work in conjunction with their cloud for Rapid Recovery offerings. This validation and verification process is what differentiates this product from anything else in the industry.
